RE: Intelliweb Trial

Dear Geoff,

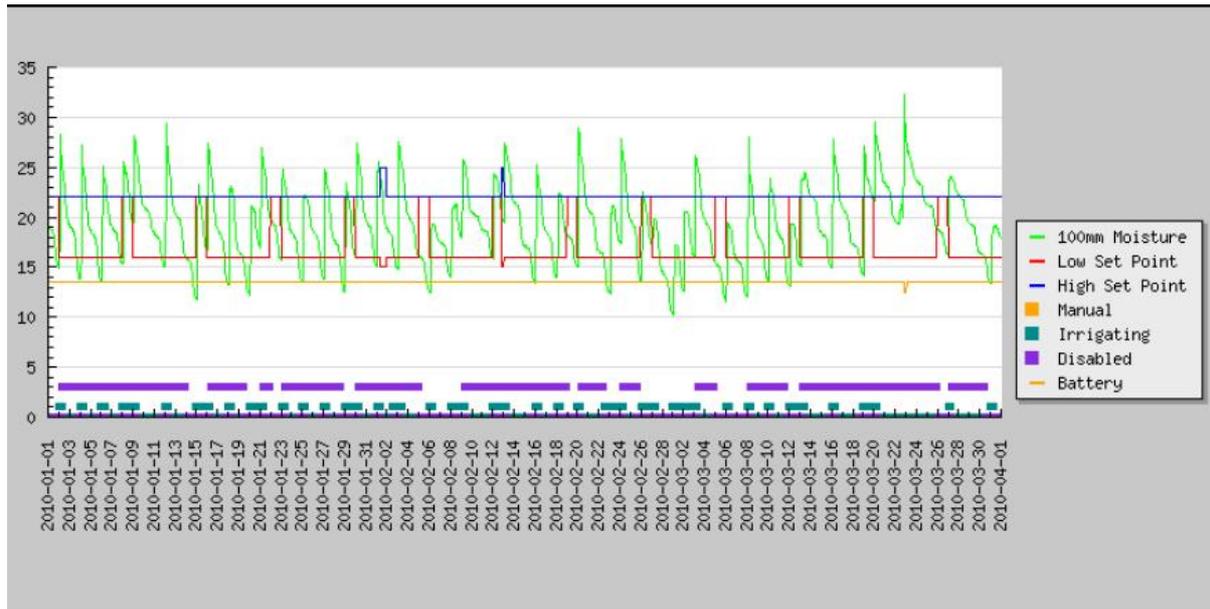

The trial of the Intelliweb system started on the 24th December 2009 at Collier Reserve. The water usage at this site is being compared to Comer Reserve, which is being watered using the weather station.

Comparison of Water Usage

Collier Reserve has used 47% less water than Comer Reserve on a volume per hectare basis.

	Irrigated Area (ha)	January Water Usage (kL)	February Water Usage (kL)	March Water Usage (kL)	Total Water Used for trial period (kL)	Water Usage (kL/ ha)
Collier Reserve	2.92	3217.8	2796.7	2418.8	8433.2	2888.1
Comer Reserve	2.00	3296.0	3833.6	3778.8	10908.4	5454.2

The soil moisture content in the surface 10cm at Collier Reserve has been maintained in a tight band between about 10% and 30% (except for the storm on the 22nd March)

Regards,

Ken Johnston
